

Software Engineering Simple Project Manuscript Format

For BS Information Technology Students

Subject: Software Engineering

This manuscript format is intended for simple software projects developed following the different phases of the Software Engineering process. The document should accompany the submitted system/project and demonstrate how students applied the Software Development Life Cycle (SDLC).

The manuscript should be concise, organized, and focused on the actual development process of the system.

GENERAL FORMAT

- Paper Size: A4
 - Margin: 1 inch on all sides
 - Font Style: Times New Roman
 - Font Size:
 - Title: 16 Bold
 - Headings: 14 Bold
 - Content: 12
 - Spacing: 1.5
 - Alignment: Justified
 - Page Number: Bottom Center
 - Binding: Softbound or Folder Compilation
 - Recommended Length: 20–40 pages
-

MANUSCRIPT OUTLINE

TITLE PAGE

Include the following:

- Project Title
- Submitted by:
 - Names of Members
- Subject:
 - Software Engineering
- Submitted to:

- Instructor’s Name
 - School Name
 - Department
 - Date Submitted
-

APPROVAL SHEET

Contains:

- Project Title
 - Names of Group Members
 - Statement of Completion
 - Signature Line for:
 - Instructor
 - Adviser (optional)
-

ACKNOWLEDGEMENT

Students express gratitude to individuals who helped in the completion of the project.

TABLE OF CONTENTS

Include:

- Chapters
 - Sections
 - Page Numbers
-

CHAPTER 1 – INTRODUCTION

1.1 Background of the Study

Discuss:

- The problem encountered
- Current process
- Importance of the proposed system
- Why the system is needed

Example:

Many small businesses still use manual recording systems which lead to data loss and inefficient transactions. This project aims to develop a simple computerized solution to improve efficiency and accuracy.

1.2 Problem Statement

State the problems the system intends to solve.

Example:

1. Manual recording of transactions is time-consuming.
 2. Records are difficult to organize and retrieve.
 3. Reports are not automatically generated.
-

1.3 Objectives of the Study

General Objective

Develop a simple system that automates the existing manual process.

Specific Objectives

1. Design a user-friendly interface.
 2. Store records electronically.
 3. Generate simple reports.
 4. Reduce processing time.
-

1.4 Scope and Limitations

Scope

Define what the system can do.

Example:

- User login
- Add/Edit/Delete records
- Generate reports

Limitations

Define what the system cannot do.

Example:

- No online payment integration
- Single-user access only

- Limited to desktop use
-

1.5 Significance of the Study

Identify beneficiaries:

- Students
 - Teachers
 - Small businesses
 - Offices
 - Users
-

CHAPTER 2 – REVIEW OF RELATED LITERATURE AND SYSTEM

2.1 Related Literature

Discuss at least 3–5 related studies/articles/sources related to the project.

Format:

- Author
 - Year
 - Summary
 - Relation to the study
-

2.2 Related Systems

Discuss existing systems similar to the project.

Include:

- Features
 - Strengths
 - Weaknesses
-

2.3 Synthesis

Explain how the proposed project differs or improves from existing systems.

CHAPTER 3 – SOFTWARE ENGINEERING PROCESS

This chapter focuses on the phases of the Software Development Life Cycle (SDLC).

3.1 Planning Phase

Discuss:

- Project idea
- Feasibility
- Target users
- Resources needed
- Development timeline

Include:

- Gantt Chart (optional)
-

3.2 Requirements Analysis Phase

Discuss:

- Functional Requirements
- Non-Functional Requirements
- User Requirements

Example Functional Requirements:

- The system shall allow login authentication.
- The system shall save records.
- The system shall generate reports.

Example Non-Functional Requirements:

- User-friendly interface
 - Fast response time
 - Simple navigation
-

3.3 Design Phase

Include system designs such as:

a. Use Case Diagram

b. Activity Diagram

c. Database Design / ERD

d. Interface Design / Prototype

Include screenshots or wireframes.

3.4 Development Phase

Discuss:

- Programming language used
- Tools and technologies used
- Coding process

Example:

- Frontend: HTML/CSS/JavaScript
- Backend: PHP
- Database: MySQL

Possible tools:

- Visual Studio Code
- XAMPP
- Android Studio

3.5 Testing Phase

Discuss the testing conducted.

Include:

Test Case	Expected Output	Actual Output	Status
Login Test	User can login	Successful	Passed
Add Record	Record saved	Successful	Passed

Types of testing:

- Unit Testing
- Functional Testing
- User Acceptance Testing

3.6 Deployment Phase

Discuss:

- Installation process
- User orientation
- System implementation

3.7 Maintenance Phase

Discuss:

- Future improvements
- Bug fixing
- System updates

CHAPTER 4 – RESULTS AND DISCUSSION

4.1 System Features

Discuss the major features of the system.

Example:

- Login Module
- Dashboard
- Record Management
- Reports

4.2 System Screenshots

Include screenshots with descriptions.

Recommended screenshots:

1. Login Page
2. Dashboard
3. Add Record Form
4. Reports Page
5. Admin Panel

4.3 Discussion of Results

Discuss:

- How the objectives were achieved
- Benefits of the system
- User feedback

CHAPTER 5 – CONCLUSION AND RECOMMENDATION

5.1 Conclusion

Summarize:

- What the system accomplished
- Problems solved
- Overall findings

5.2 Recommendations

Suggest:

- Future enhancements
- Additional features
- Improvements

Example:

- Add mobile support
- Add multi-user capability
- Integrate cloud storage

REFERENCES

Use APA format.

Example:

Pressman, R. (2019). Software Engineering: A Practitioner’s Approach. McGraw-Hill Education.

APPENDICES

Include:

- Source Code Snippets
 - Questionnaire (if applicable)
 - Additional Screenshots
 - User Manual
 - Testing Results
 - Forms and Reports
-

REQUIRED SUBMISSION

Students should submit:

1. Printed Manuscript
 2. Soft Copy (PDF)
 3. Source Code
 4. Database File
 5. Executable System/Application
 6. Presentation Slides
-

RECOMMENDED GRADING CRITERIA

Criteria	Percentage
System Functionality	35%
Application of SDLC	20%
User Interface Design	15%
Documentation/Manuscript	15%

Criteria	Percentage
----------	------------

Presentation/Demonstration	15%
----------------------------	-----

IMPORTANT NOTES TO STUDENTS

- The project should be SIMPLE but FUNCTIONAL.
- Focus on proper application of the Software Engineering phases.
- Avoid overly complex systems beyond the course scope.
- The manuscript should reflect the actual development process of the project.
- Academic honesty must always be observed.
